

# PROJECT NEWS

ISSUE NO 3 – JUNE 2021

## future 2022 skills

We have been busy moving ahead with the next phase of the project. We are delighted to present our re-skilling clips, a collection of best practice examples with audio visual interviews from managers, entrepreneurs or HR managers who have successfully implemented the skills.

Continuing to take inspiration from the World Economic Forum Report that “by 2022 no less than 54% of all employees will require significant upskilling”? We are confident the content created will provide examples of business strategies in cognitive flexibility, lifelong learning and skill gap filling, and will help to identify possible development pathways of the learners / training participants.

Which skills are in demand?

Analytical thinking and innovation  
Complex problem solving  
Active learning and learning strategies

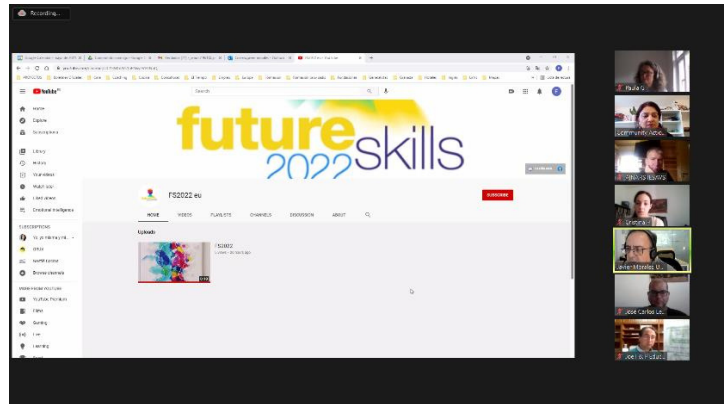

Leadership and social influence  
Emotional Intelligence  
System analysis and evaluation  
Creativity, originality, initiative

Reasoning and problem solving  
Technology design and programming  
Critical thinking and analysis

'these skills are needed more than ever'

Our online meetings continue as we navigate through COVID restrictions

Please take a look at our collection of interviews from managers, entrepreneurs and HR professionals.
